

Unlimited Electricity

Media Kit

Welcome to Unlimited Electricity, home of the Infinity Power Generator™

We are thrilled to announce the development of an all new power source, one that doesn't depend on costly fossil fuels or fickle weather conditions. By harnessing the power of magnets, Unlimited Electricity has created a power generator that creates clean, safe, low-cost energy for decades.

Introducing the Infinity Power Generator™, the future of domestic energy production.

Once installed, the Infinity Power Generator™ can produce electrical power nonstop for close to 40 years. Because high quality magnets only depreciate around 1% every decade, it's possible that these generators will outlast all projections and precedent.

Unlike solar and wind power sources, the Infinity Power Generator™ does not require specific weather conditions. It can function in virtually any environment and doesn't require expensive building modifications. Depending on electricity needs, a typical suburban home can be powered by a generator that's small than a hot water heater.

Please contact us if you have any questions or are interested in receiving additional information.

COMPANY PROFILE

At Unlimited Electricity our goal is create, Power to Change the World™

Traditionally, people have created electricity by transforming one form of energy into another, usually with a harmful byproducts. Fossil fuels and nuclear energy for instance, both have well-documented negative impacts on our planet's environment.

Unlimited Electricity was founded in 2014 with the sole purpose of create products that generate electricity continuously, safely, and cheaply, without harming the earth or the people who live on it.

When possible, we also intend to bring our innovative technology to the developing world at little or no cost. We firmly believe that no hospital or school in the world should turn people away because of a lack of electricity.

Unlimited Electricity is led by Joseph M. Hill, a forward thinking entrepreneur with a strong sense of philanthropic and humanitarian understanding and dedication to helping the lost, forgotten and homeless.

Unlimited Electricity exists to harness the Power to Change the World™

Profile of Joseph M. Hill, Inventor & CEO

Joseph M. Hill is a successful entrepreneur and visionary that brings people and ideas together to create unique opportunities through insight and execution. Most recently, Hill has founded the innovative power company Unlimited Electricity which has begun development of a patented frictionless wind turbine energy system as well as the patent pending Infinity Power Generator™.

Hill joined Pannonia Group, Inc. (DBA Prolab Digital) in the spring of 1990 as V.P. of Sales, Marketing and Operations. Under his leadership during the past 24 years, he successfully transformed Prolab Digital from a boutique photo lab into one of the most technically advanced digital imaging facilities in the country. Over the past 24 years, Hill has consistently grown the customer base and profits of this organization. He is responsible for all sales and key relationship development that included Disney Stores, Ross Dress for Less, and 21st Century Fox.

Prior to founding Unlimited Electricity Hill became the CEO for a real estate group that focuses on buying resort land, multi-tenant, and single family homes in the western United States.

Hill's training started young. In the 1970's, Hill began importing and selling rare commodities. At 11, he was among the first pioneers to write binary code and basic software on the Apple II. He pursued a degree in sales and marketing at California Polytechnic State University in Pomona. While at Cal Poly, Hill officially started his first company, Escomat, selling computer hardware, cad plotters and installation services to members of Business Network Marketing International, a lead referral group.

PRODUCT INTRODUCTION – INFINITY POWER GENERATOR

Unlike conventional electricity-producing technology that spins a coil around a contact point, the Infinity Power Generator™ utilizes the strength of finely tuned magnets to reverse the process, spinning a cylinder around the coil. In the process we have eliminated nearly all load-bearing and friction-producing contact points. The lack of friction means that these products require very little servicing, and can run continuously for decades at a time.

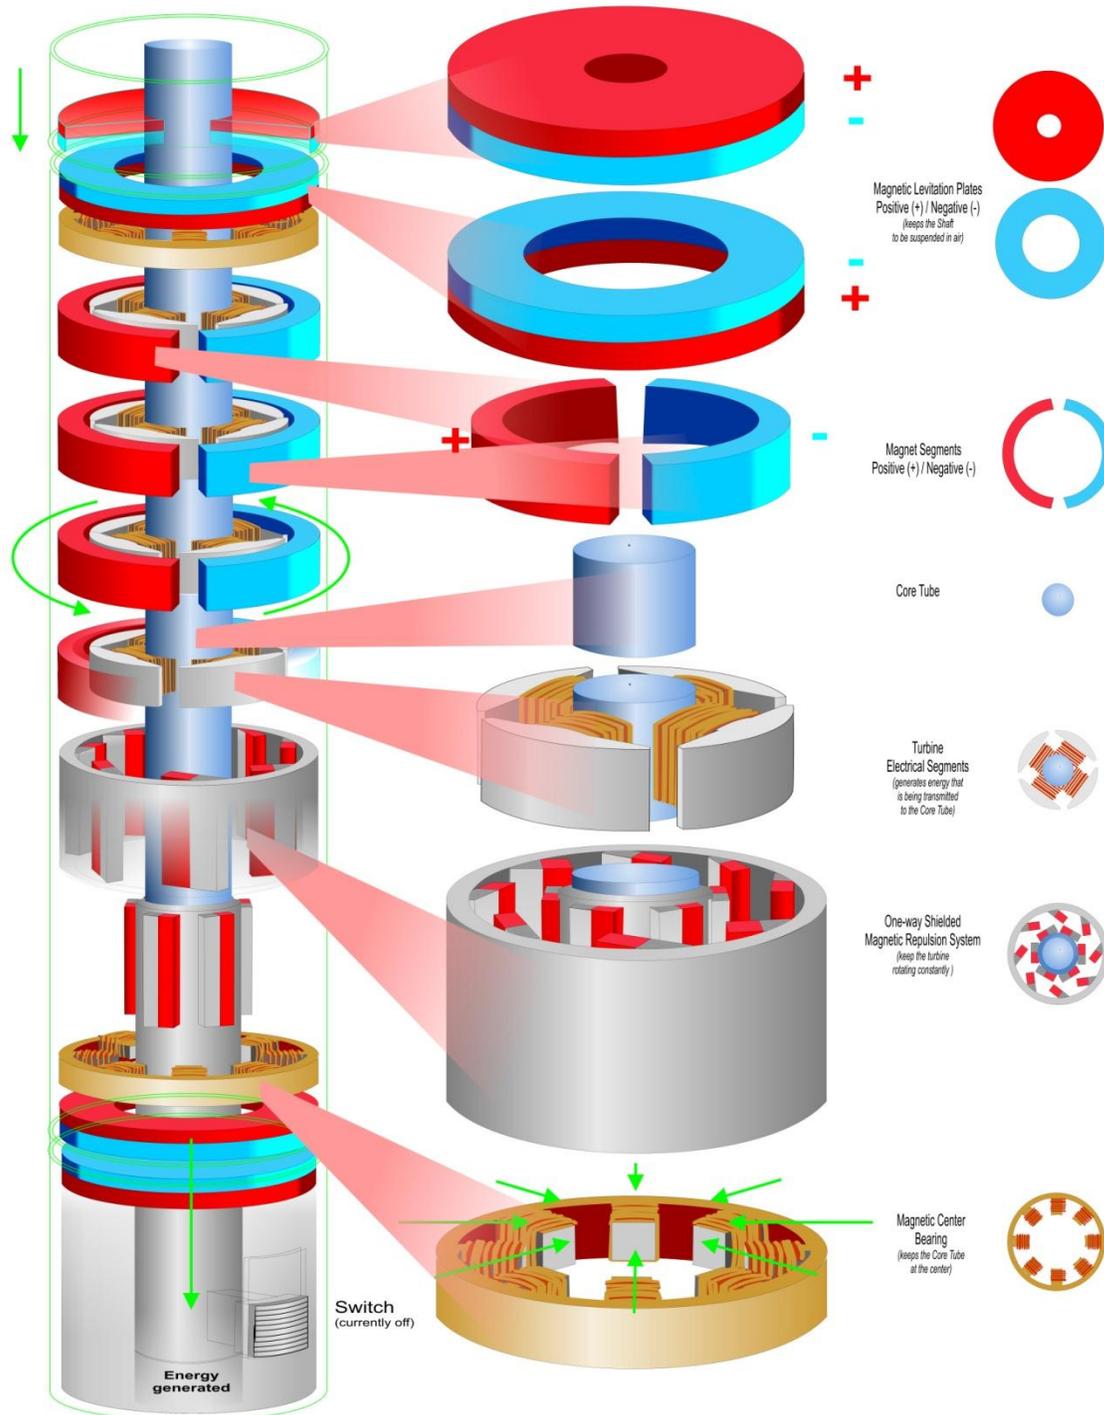

Clean, alternative energy can finally take its next step forward.

Small scale Infinity Power Generators™ are light and durable enough to be perfect for personal use in remote areas such as camping and hiking. With a wide range of power and flexible scalability, almost any electricity need can be met by our technology.

With a simple on/off switch, the Infinity Power Generator™ can be placed virtually anywhere, continuously providing, clean electricity for nearly 40 years.

Next Generation Power Generator Fits Inside a Duffel Bag [Press Release]

Energy innovation company Unlimited Electricity has developed a generator capable of powering a suburban home without the use of fossil fuels, wind, solar, or thermal energy. The patent-pending device is unlike conventional power generators because it runs on self-generated magnetic energy.

Los Angeles, California ([PRWEB](#)) September 05, 2014 -- [Unlimited Electricity's Infinity Power Generator](#) consists of an array of magnets configured to spin inside an enclosed cylinder. It produces no greenhouse gasses, has few touching parts, and won't require expensive building modifications. Depending on a home's power needs, an Infinity Power Generator could fit in a space smaller than a set of golf clubs.

Unlimited Electricity is currently developing a prototype of the Infinity Power Generator at the Integrated Magnetics production facility in Culver City, California. Initial projections are promising, indicating that this generator could possibly run non-stop for years at a time. With magnets depreciating 1% per 10 years, these generators are expected to outlast their solar and wind powered competitors by more than a decade.

Joseph Hill, Unlimited Electricity's founder and CEO, is excited about the possibilities of independent power generation, saying, "The options for this technology are limitless. Every home in America can now produce more power than it needs. By decentralizing the electrical grid it will be safer from outside attack and more reliable than it has ever been in history."

Hill's plans for the Infinity Power Generator don't end there, however. The small-yet-efficient design means that these generators can provide power to remote locations like scientific research stations, as well as improving the infrastructure of third world countries. "No school or hospital in the world should turn people away due to a lack of electricity. Unlimited Electricity's motto is, 'Power to Change the World.'"

Unlimited Electricity is accepting preorders through unlimitedelectricity.com where there are a variety of packages available for virtually any size home or business. Down payments are 10% of the total purchase cost, with a 25% discount for early adopters.

(310) 625-4411
info@unlimitedelectricity.com

As with alternative energy sources like solar and wind power, Infinity Power Generators will tie into the existing electrical grid allowing the meter to "spin backwards" when a generator produces more electricity than the home uses, a practice referred to as "net metering." In these cases the local utility purchases back the excess electricity, meaning that the generator is not only saving electricity costs, but is literally producing income for the owner. This combined with local, state, and federal incentives for alternative energy mean that an Infinity Power Generator could possibly pay for itself in less than five years.

FREQUENTLY ASKED QUESTIONS

Q. When will a prototype be ready?

A. Soon. We are working with Integrated Magnetics in Culver City, California to put together the proof of concept. We anticipate having a fully functioning prototype before the end of the year.

Q. When will full scale production begin?

A. Once the prototype is completed we will rigorously test our design in real world and laboratory conditions. Upon receiving preliminary results we will begin the first round of limited production. After we are satisfied with the design and output, we will submit the design for regulatory scrutiny. We anticipate this being completed by the Spring of 2016. After that, we expect to ramp up to nearly 1 million units per year.

Q. How do I purchase an Infinity Power Generator™?

A. Preorders are currently available on our website unlimitedelectricity.com. Early adopters will receive 25% off of the full purchase price. Down payments are for 10% of the full purchase price depending on kWh requirements.

Q. Will I need an electrician to install this product?

A. Yes. We are currently training certified electricians. Installation will follow similar procedures and permitting process that residential solar panels currently do.

Q. Can I use this product overseas?

A. Power output and usage requirements vary from country to country. We are building the product for use in the US market, however, we expect to modify it shortly thereafter for versatile international power needs. If you are interested in using our products abroad please [contact us](#) for specifications.

Q. What other products is UE currently developing?

A. We have patented an innovative wind turbine design that is waiting in the wings. We also have a few other products in the works that we're not quite ready to talk about yet. Stay tuned. ;)
